

# Read Me First

#git-workshop

Welcome to the Git workshop!

## Directory explanation

- The “readings” directory contains the entire workshop in textual form.
- The “cheat\_folders” are there to provide a fallback if you get really lost. Each folder refers to what the repository state should look like **after** completing the relevant reading.

For example, if you want to start on [Local Git Repo - #2 Branching](#), then make a copy of the basics\_1 directory.

## Case 1: Attending the workshop in person

- The only thing you need to read for now is the [Git Setup](#) file.
- If you get lost or if the pace of the workshop is too slow/fast for you, the readings are there for you to reference.
- If you break your repo and just want to skip ahead to the next section, the “cheat\_folders” are there for you.

## Case 2: After the workshop

- The [Git Setup](#) file is there to get you set up, and then proceed through the rest of the readings in order. You may find the slides useful as well.
